4.) AVATAR (221-81771)

Category: 03. Mountain-climbing equipment

Ice Axe

The most advanced ice tool in the galaxy. The ultimate axe for technical climbers. Following Grivel's tradition the blade is Hot forged in chromolly steel. For the first time in the world of climbing tools a MAGNESIUM composite has been used within an ice axe, in this case for the headpiece, the same materials are used everyday on Formula 1 ,ultralight car parts. The shaft is realized by a computer numerical controlled machine in 7075 Alloy The shaft has multiple grips for traction, hand swap-overs, reverse traction, and lets the climber s imagination run wild. No compromise over quality Size : cm 51 Weight: 640gr - 22,6 ozs

7.) b+n CRASHBAG (221-81865)

Category: 02. Backpacks / Travel luggage

Boulder-Backpack

The crashbag is a newly designed backpack for the bouldering sport. Used as a combination with a crashpad it allows an easy access to the bouldering area. No more cumbersome one-sided bag transportation, no more climbing shoes squeezed into the pad. The 35 Litre pack is fastened to the centre of the pad by means of two movable & adjustable plug-closures, independent of the pad size. The pack can also be carried comfortably between the boulders without using the combination, by tightening the belt strap and feeding it into an eyelet. Divisible Zippers/Velcro fasteners ensure a convenient and stable access opening, also when the bag is attached.

11.) BEAL DIABLO 9.8mm (221-81949)

Category: 03. Mountain-climbing equipment

Revolutionary climbing rope construction

With all the benefits of the UNICORE Process (linking the core and sheath of this rope in a way that broadly limits movement between the two parts), this dynamic rope suffers less sheath inflation, stays more supple, is more agreeable to handle and has a longer lifetime. Thanks to its very fluid running sheath this rope performs even better when pulling slack and clipping than classic ones of smaller diameter and lower weight. The climber really has the sensation of handling a much thinner and lighter rope because of the increased running fluidity, whilst retaining the assurance of a rope of greater diameter. Designed for expert climbers

13.) Mammut 9.8 Transformer (221-81960)

Category: 07. Products of high ecological and sustainable value

Climbing rope and accessories

A rope like no other. The 9.8 Transformer is an all-round climbing rope that is made entirely from transfer yarns, which are usually disposed of due to their colour variations. This means that every metre of rope has a unique design. By using these yarns, Mammut is making another contribution to the environment. Thanks to the SuperDRY coating, the 9.8 Transformer has excellent characteristics and very good handling properties. Mammut's ropes and webbing are produced using high-quality polyamide which is dyed at the yarn stage. During the dyeing process, the transition from one colour to another results in so-called "transfer yarn".

19.) Mammut Nordwand TL (221-82087)

Category: 01. Apparel/Helmet/Shoes

Bergschuh

This boot cannot be stopped by anything. With or without crampons, the robust carbon insole carries the wearer safely over every terrain. The Nordwand TL is equally well suited for alpine tours in the winter as for ice and mixed climbing or traditional multi-pitch tours. Robust, warm and astonishingly light, it constitutes the perfect footwear for the Mammut Eiger Extreme line. Its massive appearance is deceptive since the Mammut Nordwand TL only weighs 1888 grams. More important, however, are the arguments that speak for the alpine boot.

20.) Tec Step Bionic Turn (221-82092)

Category: 03. Mountain-climbing equipment

Via Ferrata Set

The advance in Mammut's Tec Step technology takes on board the latest findings that have emerged from safety research: Exhaustive series of tests have shown that a lower impact force over a longer braking distance is essential when it comes to neutralizing a climber's fall on a via ferrata. As a result, Mammut has again optimized the way its Tec Step braking technology behaves: the Mammut Tec Step Bionic now provides more absorption of the impact force for enhanced climber safety. The overall impact force has been reduced to lessen potential harm to the body.
